Purpose Code Logic

1) Check if field 77B is used and recognized in the database and contains /country code/
2) If not, check if field 70 (Remittance information) is used and recognized in the database and contains /countrycode/
3) If not, check if field 72 (Sender to receiver information) is used and recognized in the database and contains /countrycode/
4) If not, check if field 26T (Transaction type) is used and recognized in the database
5) If not, check if field 77B is used but not recognized in the database. If that is the case, display a customizable message to indicate that a wrong purpose code was used
6) If not, check if field 70 is used but not recognized in the database. If that is the case, display a customizable message to indicate that a wrong purpose code was used
7) If not, check if field 72 is used but not recognized in the database. If that is the case, display a customizable message to indicate that a wrong purpose code was used
8) If not, check if field 26T is used but not recognized in the database. If that is the case, display a customizable message to indicate that a wrong purpose code was used
9) If not, display a customizable message to indicate that no purpose code was found

Note: fields 77B, 70 and 72 are limited to three lines of 35 symbols. Field 26T is limited to 3 characters only.
